EDUCATION

Stony Brook University | GPA: 3.55 Expected May 2027
B.S., Computer Science and Business Management (Double Major) | Finance Specialization
Coursework: Investment Analysis, Principles of Finance, Software Engineering, Introduction to Data Science

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, Solidity, HTML, CSS
Frameworks and data: React, Next.js, FastAPI, Node.js, ethers.js, PostgreSQL, Redis, SQLite
Tools: Git, GitHub Actions, Docker, Vite, Ganache, pytest

SELECTED PROJECTS

EVHunter Sports Odds Analytics | Python, FastAPI, Next.js, PostgreSQL, Redis
- Built a Next.js/TypeScript interface and FastAPI backend for odds comparison, expected-value analysis, and manual bet tracking, with isolated demo and live records.
- Implemented fee-adjusted arbitrage and fractional-Kelly calculations with explicit cent rounding, liquidity limits, and stake allocation across matching market outcomes.
- Added signed sessions, CSRF protection, login throttling, and transaction-backed settlement; wrote PostgreSQL/Redis integration tests for concurrent requests and duplicate balance-update prevention.

DAMD Treasury Wallet | React, Solidity, ethers.js, MetaMask
- Collaborated on a React/Solidity treasury-wallet prototype supporting test ETH deposits, M-of-N owner approvals, payment timelocks, and per-payment and daily spending caps.
- Integrated an ethers.js service for contract reads, transaction previews, signing requests, and state refreshes after confirmations, account changes, and network switches.
- Added GitHub Actions checks for linting, contract compilation, service and contract tests, and production builds.

GEX Options Exposure Dashboard | TypeScript, Node.js, HTML Canvas
- Built an options analytics dashboard with TypeScript and HTML Canvas, sharing one upstream polling loop per symbol and streaming client-specific results through Server-Sent Events.
- Separated pricing, data-provider, and server modules; tested Black-Scholes gamma against numerical derivatives and covered market calendars, upstream failures, and idle stream restarts.

Student Success Analytics Dashboard | Python, pandas, scikit-learn, D3.js
- Processed 500 student records with imputation, standardization, PCA, and k-means; built coordinated D3.js views with component selection and clustering controls.

EXPERIENCE

Warby Parker | Sales Advisor (Part-time) Aug 2025 - Present
- Guide customers through frame, lens, and pricing decisions; manage order placement, payments, returns, and adjustments while supporting store sales goals.

FundingWire | Business Development Intern Jul 2026 - Aug 2026
- Researched and qualified partnership targets for a startup funding-intelligence platform; tailored outreach to startup organizers and LinkedIn groups.
- Built a prioritized pipeline of NYC and virtual speaking, pitching, and conference opportunities; booked partnership meetings for the CEO.

Digital Girl Inc. | Intern Jul 2025 - Aug 2025
- Built and published HTML/CSS websites through Code.org projects and created digital flyers for community programs.
- Coordinated guest lists and program logistics, and tracked attendance and engagement for post-event reporting.

Computer Care and Learning | Intern Jul 2024 - Aug 2024
- Resolved Outlook and printer issues, maintained backups and file systems, and supported QuickBooks setup.

Additional training: Citi, Wells Fargo and JPMorgan Chase software simulations (Forage); AI Literacy (IBM, Jan 2026).
